

BHARAT FRONTIERS

THE KNOWLEDGE POST
SCIENCE • TECHNOLOGY • POLICY • BUSINESS

SEPTEMBER 2026 — MONTHLY E-PAPER

Editorial Responsibility

Editor-in-Chief: **Shravanchandra G, M.Sc, M.Tech**

Editorial correspondence: bharatfrontiers@gmail.com

CONTENTS

- 01. India's Emerging Technology Frontiers** — An evidence-led look at the technologies, research ecosystems and industrial capabilities shaping India's next technology frontier.
- 02. Research in the Next Decade** — How research priorities, institutions, talent and infrastructure can shape the next decade of discovery and application.
- 03. The Frontiers of Modern Scientific Research** — A clear guide to the changing boundaries of scientific research and the tools expanding what researchers can investigate.
- 04. How Research Becomes Innovation** — Understanding the path from research and discovery to prototypes, products, services and measurable public value.
- 05. Artificial Intelligence: From Tool to Infrastructure** — Why AI is increasingly being understood as an infrastructure layer involving data, compute, models, applications, skills and governance.
- 06. Semiconductors and Strategic Technology** — An accessible examination of semiconductor design, fabrication, packaging, supply chains and industrial capability.

07. Governing Emerging Technologies — The policy questions raised when new technologies affect data, competition, safety, infrastructure, innovation and society.

08. Can Deep-Tech Become Big Business? — How research, intellectual property, capital, startups, manufacturing and markets interact in deep-tech commercialisation.

09. From Laboratory to Society — The journey from scientific research to real-world applications across healthcare, energy, agriculture, mobility and public services.

10. What Is a Semiconductor? — A plain-language explanation of semiconductors, chips, wafers, fabrication and why these technologies matter.

11. Can India Turn Technology Ambition Into Technological Capability? — An evidence-based framework for examining the relationship between policy, funding, research, talent, infrastructure and industry.

MONTHLY KNOWLEDGE FRONT

September 2026

India's Emerging Technology Frontiers

TECHNOLOGY · ANALYSIS

An evidence-led look at the technologies, research ecosystems and industrial capabilities shaping India's next technology frontier.

Research in the Next Decade

SCIENCE · ANALYSIS

How research priorities, institutions, talent and infrastructure can shape the next decade of discovery and application.

The Frontiers of Modern Scientific Research

SCIENCE · FEATURE

A clear guide to the changing boundaries of scientific research and the tools expanding what researchers can investigate.

How Research Becomes Innovation

RESEARCH · EXPLAINER

Understanding the path from research and discovery to prototypes, products, services and measurable public value.

Artificial Intelligence: From Tool to Infrastructure

TECHNOLOGY · FEATURE

Why AI is increasingly being understood as an infrastructure layer involving data, compute, models, applications, skills and governance.

Semiconductors and Strategic Technology

TECHNOLOGY · ANALYSIS

An accessible examination of semiconductor design, fabrication, packaging, supply chains and industrial capability.

Governing Emerging Technologies

POLICY · ANALYSIS

The policy questions raised when new technologies affect data, competition, safety, infrastructure, innovation and society.

Can Deep-Tech Become Big Business?

BUSINESS · ANALYSIS

How research, intellectual property, capital, startups, manufacturing and markets interact in deep-tech commercialisation.

From Laboratory to Society

CULTURE · FEATURE

The journey from scientific research to real-world applications across healthcare, energy, agriculture, mobility and public services.

What Is a Semiconductor?

SCIENCE · EXPLAINER

A plain-language explanation of semiconductors, chips, wafers, fabrication and why these technologies matter.

Can India Turn Technology Ambition Into Technological Capability?

ANALYSIS · ANALYSIS

An evidence-based framework for examining the relationship between policy, funding, research, talent, infrastructure and industry.
